RESEARCH PROJECT GUIDELINES

- **Use GitHub: github.com/user/Research-Project-Name**

- **Use only one branch: master**

- **GitHub required structure:**

```
/docs/
    /images/            // Resources for research article (if required)
    _config.yml         // GitHub page theme configuration
    README.md           // Research article
                            // Problem Description
                            // State of the Art (Current Solutions)
                            // Proposed Solution
                            // Possible Innovations
                            // Provided Code and/or Templates
                            // Links and References
.gitignore              // Configured for C++/VS temp files
LICENSE                 // Project licence: MIT
README.md               // Project excerpt:
                            // Title
                            // Description
                            // About Author
                            // Relevant Links
```

areas requiring code should provide:
```
/exercises/             // Code exercises (with TODO points)
    /Game/
    /Motor2D/
    Research.sln
/code/                  // Code solution
    /Game/
    /Motor2D/
    Research.sln
```

areas requiring docs should include:
```
/templates/             // Basic template:
    README.md           // GDD, TDD, Art Bible, Audio Bible...
```

NOTE: Correct project structure and naming is mandatory and will be evaluated for the project mark.
